SYMBOLS

Standard notations, when used throughout this publication have meanings as follows :-

n.a.	Not available.
n.y.a.	Not yet available.
r	Revised.
p	Preliminary or subject to revision.
...	Nil or less than half the final digit shown, or not applicable.
-	Where drawn across a column between two consecutive figures, indicates break in continuity of series.

ROUNDING OF FIGURES

Where figures in this publication have been rounded, any discrepancies between the totals shown and the sums of the component items are due to rounding.

EXPLANATORY NOTES

1. This bulletin contains a summary of vital statistics for New South Wales for the year ended 31 December 1975. Detailed statistics are available from 1973 in the bulletins entitled "Demography" and "Causes of Death" and for earlier years in the Population and Vital Statistics part of the Statistical Register, as well as in the Official Year Book of New South Wales. In addition, statistics in greater detail (in the form of computer print-out tables) are available from this Office of the Bureau for specialised use. Particulars of these tables are available on request.
2. Estimates of the Population are prepared by adding to the population ascertained at the previous census the subsequent natural increase (the excess of births over deaths) and estimated net migration. The estimated net migration component is based on statistics of overseas migration by State of residence and estimates of interstate transfers of residence, derived from recorded transfers of State of residence under child endowment and Commonwealth electoral procedures, with an estimated allowance for transfers of residence not covered by these procedures. No allowance is made for holiday, business, or other similar short-term movements interstate. Population estimates for periods since the Census of 30 June 1971 are subject to revision when the final results of the 1976 Census of Population become available, and any discrepancy disclosed by the census is added to the estimated net migration.
3. Births and Deaths in Statistical Divisions. Births registered in New South Wales are allocated to a local government area according to the usual residence of the mother, and deaths registered (other than infant deaths which are assigned to usual residence of mother) are allocated according to the usual residence of the deceased; in cases where the usual residence is outside the State, the birth or death is allocated according to the local government area in which it occurred. As the information reported is in many cases insufficient to establish the usual residence with complete accuracy, the figures for individual local government areas should be regarded as approximate. For local government areas contiguous to the State's borders, the figures may be affected to some extent by interstate movements for hospitalisation.
4. Still-births.
 - (a) Still-births are not included in statistics of deaths. Statistics of still-births relate to births of fetuses, registered in N.S.W. during the year, which were of at least 20 weeks gestation, or at least 400 grammes weight at delivery, and whose heart did not beat after the complete expulsion or extraction of the child from the mother.
 - (b) As a result of procedural changes affecting the date of registration of still-births in the years 1974 and 1975, the figures shown for these years (although correct when combined) are not strictly comparable with each other or with previous and subsequent years. The effect of these changes cannot be precisely measured, but the number of still-births registered in 1976 (which was 835) was compiled on a comparable basis to that of 1973 and earlier years.
5. Statistical Areas of N.S.W.
 - (a) For the purpose of presenting the principal series of official statistics for the State, New South Wales is divided into a small number of geographical areas.
 - (b) The primary division of the State is into 12 Statistical Divisions. These Divisions (except the Sydney, Outer Sydney, and Far West Statistical Divisions) are subdivided into two or three parts, to provide a second tier of statistical areas comprising (a) the Newcastle and Wollongong Statistical Districts and (b) 21 Statistical Subdivisions.
 - (c) The Statistical Divisions are intended to represent "regions" of the State which are characterised by discernible social and/or economic links between the inhabitants and economic units within them, under the unifying influence of one or more major cities or towns. The boundaries of the Divisions have accordingly been delineated on the basic criterion that the degree of economic and/or social contact and interaction within each Division should be maximised. It should be emphasised that the boundaries of the Divisions cannot be regarded as sharp lines of demarcation - they may, of necessity, be positioned within peripheral zones in which the influence of two or more "focal" cities or towns overlap in varying degrees.

EXPLANATORY NOTES (continued)5. Statistical Areas of N.S.W. (continued)

(d) In the case of Sydney and its periphery, the factors taken into account in drawing the divisional boundaries are necessarily different from those for the rest of the States. The Sydney Statistical Division is predominantly urban in character - and its boundary was specially delineated in 1966 to embrace the area expected to contain the urban development of Sydney (and associated smaller urban centres) during at least the next twenty years. The area within the Division is now (or is expected to be) socially and economically oriented, to a marked degree, towards Sydney. The Outer Sydney Statistical Division embraces areas which are on the periphery of the Sydney Division, but which have less distinct economic and social orientation towards Sydney; such peripheral areas have many independent characteristics and do not logically form part of any other Statistical Division.

(e) Statistical Districts (mentioned above) are general-purpose statistical areas. They are predominantly urban in character, and have been delineated using the same concepts as for the Sydney Statistical Division. (The Newcastle District is within the Hunter Statistical Division and the Wollongong District within the Illawarra Division).

(f) Statistical Subdivisions are component areas within Statistical Divisions, delineated broadly on the basis of topographical and/or climatic features and reflecting, inter alia, some degree of homogeneity of agricultural activity.

(g) Note. The statistical areas described above were introduced from 1 January 1970. In the light of developments since then, revised statistical areas will be introduced for the presentation of statistics relating to 1975-76 or 1976 and later years. The new areas will incorporate the following changes :-

- i. the amalgamation of the Sydney and Outer Sydney Statistical Divisions, to form a new Sydney Statistical Division;
- ii. the delineation of Subdivisions within the new Sydney Statistical Division;
- iii. the dissection of the former North Coast Statistical Division into the Richmond-Tweed Division (formerly the Richmond-Tweed Subdivision) and the Mid-North Coast Division (the balance of the former North Coast Division); and
- iv. the delineation of six additional Statistical Districts (Bathurst-Orange, Tamworth, Wagga Wagga, Broken Hill, the N.S.W. part of the Albury-Wodonga District, and the N.S.W. part of the Gold Coast Statistical District). (In addition, the N.S.W. part of the Canberra Statistical District will be separately identified).
